# PHOENIX HEALTH PLAN DRUG FORMULARY

The Phoenix Health Plan (PHP) Drug Formulary was created to ensure safe, appropriate and cost-effective utilization of medications. With a primary consideration to provide comprehensive drug coverage for patients, the Formulary was evaluated in all therapeutic categories and contains those agents that offer the greatest value in each class. Provider's utilization of the PHP Drug Formulary ensures our member's pharmaceutical needs are met in a high quality, cost-effective manner. Formulary development and maintenance is a dynamic process and is subject to periodic changes.

## THE PHP PHARMACY AND THERAPEUTICS COMMITTEE

### PURPOSE AND GOALS

The PHP Pharmacy and Therapeutic (P & T) Committee consists of physicians, pharmacists, and other professionals representing various medical specialties, whose primary purpose is to develop and monitor the PHP Drug Formulary and to establish programs and procedures to ensure high quality, cost-effective drug therapy. The PHP P & T regularly reviews new and existing medications to ensure the Formulary meets the needs of both members and providers.

### FUNCTION AND SCOPE:

The P & T has the following primary functions:

1. To serve in an advisory capacity in all matters pertaining to use of drugs and drug therapy.
2. To perform a periodic review of the PHP Drug Formulary and to provide advice to the plan regarding modifications of the formulary based upon an objective analysis of the safety, efficacy, and cost-effectiveness of each medication.
3. To develop educational programs and materials for health plan participants, physicians, and provider pharmacies related to drug use.
4. To evaluate and recommend drug therapy guidelines and prior authorization criteria based upon safety, efficacy, and cost-effectiveness.
5. To manage and review appropriateness of drug utilization.
6. To make recommendations for policies and procedures relating to drug handling and administration for health plan members.

## PROCEDURES FOR AMENDING FORMULARY

Physicians may request a formulary addition, deletion, or change in prior authorization criteria for the PHP Drug Formulary by submitting a Drug Formulary Change Request form to the plan. A request form may be obtained on our website [www.phoenixhealthplan.com](http://www.phoenixhealthplan.com) or by contacting a Network Management Representative directly at 602.824.3720. Requests should contain at least two (2) supporting documents that are randomized, controlled, clinical trials written in peer review journals. No marketing materials will be accepted. Requests will be forwarded to Pharmacy Services, researched and presented to the P & T Committee. Mail or fax requests to:

Phoenix Health Plan  
C/O P & T Committee Pharmacy Director  
7878 N. 16<sup>th</sup> St. Suite 105  
Phoenix, AZ 85020  
Fax: (602) 674-6652, (888) 887-9982

## THE PHP DRUG FORMULARY

The PHP Drug Formulary is a list of medications eligible for coverage by PHP. The covered medications are organized by therapy class and are summarized in the Table of Contents. Both brands and generics are available, however, if a medication is available generically, only the generic formulation is covered. If a generic formulation becomes available sometime in the year, the brand formulation will no longer be covered and the generic will automatically process. For specific information about the medication, please refer to a comprehensive drug information resource and the product package insert.

If a drug name does not appear on the list of Formulary Medications, then the drug requires a prior authorization. *There are some drugs listed that have restrictions, please note any comments.* A list of preferred drugs that require prior authorization immediately follows the Formulary.

Please look to the website [www.phoenixhealthplan.com](http://www.phoenixhealthplan.com) for the most up-to-date Formulary.

## NON-COVERED MEDICATIONS

Please note that certain medications are excluded by AHCCCS and thus are **not** covered by the plan. In order to reduce the risk of adverse effects to our patients, PHP will not cover drugs when prescribed for experimental or investigational uses. These medications include but are not limited to the following:

- Erectile dysfunction drugs and products
- Topical Minoxidil
- Retinoic Acid for Cosmetic Purposes
- Experimental or Investigational Medications
- Medications purchased outside of the United States
- DESI (Drug Efficacy Study Implementation) drugs – drugs not deemed effective by the FDA.

## INJECTABLE MEDICATIONS

Injectable medications obtained by prescription, other than Insulin, Insulin Supplies, and those specifically listed on the PHP formulary, are eligible for coverage. Please see the J code guide for prior authorization requirements for coverage of injectable medications. Under special circumstances, PHP may elect to provide coverage for other injectable medications and will advise our pharmacy benefit manager (PBM) that an exception is to be made.

## NON-PRESCRIPTION DRUGS

If an over-the-counter (OTC) product is listed on the formulary and a prescription is written and presented to the pharmacy, the product is covered by the PHP. Insulin and insulin syringes are available to plan members with a prescription. OTC medications that are *not* listed in the formulary are not available for coverage by the Health Plan unless prior authorization was obtained first.

## LIMITATIONS AND RESTRICTIONS

The plan may have restrictions on certain formulary medications. Restrictions are limitations on quantities, dosages or certain criteria and are as listed. Drugs that require prior authorization or have special status (exempt for certain providers) may have quantity/dose restrictions. Unless indicated otherwise on the formulary, all dosage forms and strengths of a listed medication are covered.

### Step Therapy

Some formulary medications that usually require prior authorization may process via step therapy, a step-wise process in the pharmacy claims processing system. The pharmacy claims processing system detects first step medication fills in the past (up to 90 days) of a member's prescription fills. If a member has been compliant, a prior authorization request submission is not necessary or required. The following medications may process in that manner:

**Budesonide/Formoterol (Symbicort®):** Available if member is compliant in refilling his/her inhaled corticosteroid for at least two months.

**Clarithromycin (Biaxin®):** Available with concomitant prescription fills of Amoxicillin or Metronidazole and Prilosec OTC up to 80mg/day (#4, 20mg tablets for H. pylori treatment. Indicate on the prescription "For H. pylori."

**Fluticasone/salmeterol (Advair®):** Available if member is compliant in refilling his/her inhaled corticosteroid for at least two months.

**Insulin glargine (Lantus®):** Available after documented and compliant Novolin NPH or 70/30 therapy and concomitant short acting oral agents or short acting insulin.

**Montelukast (Singulair®):** Available if member continues to be compliant refilling his/her Inhaled corticosteroids (i.e., Flovent, QVAR, Advair, Pulmicort Respules).

**Pantoprazole (Protonix®):** Available after failure of documented and compliant omeprazole OTC therapy written with your prescription. Omeprazole 20 mg OTC tablets (Prilosec OTC) may be used up to 80 mg per day.

**Oxycodone ER (Oxycontin®):** Quantity 60 per month may be available after documented trial and failure of Kadian® and generic MS Contin therapy due to intolerance as documented by an FDA MedWatch 3500 form submission and medical records.

**Ropinirole (Requip®):** Available for Parkinson's, Neurologists exempt. Available for restless legs syndrome 1). after a documented and compliant trial and failure of levodopa/carbidopa immediate

release dosed before bedtime or gabapentin, tramadol and clonazepam and 2) serum ferritin and iron levels must be within normal levels (NEJM 2003; 348:2103 – 9)

**Smoking Cessation Products:** Per AHCCCS, coverage is only for Title XIX members. Members are encouraged to enroll in ASH Line by calling 1-800-556-6222. Maximum supply is 12 weeks in six months.

**Tamsulosin (Flomax®):** Available after failure of documented and compliant terazosin, prazosin or doxazosin therapy.

**Sumatriptan (Imitrex®) Spray / Injection:** Available after a documented and compliant Imitrex tablets therapy and concomitant migraine prophylaxis.

**Simvastatin/ezetimibe (Vytorin®):** Available after a documented and compliant trial of maximum of 80mg generic Zocor (simvastatin).

### **Prior Authorizations and Formulary Exceptions**

Physicians are encouraged to consult the PHP Drug Formulary when prescribing medications for plan members. Formulary medications are available for plan members for the vast majority of therapeutic needs. If the patient requires medication that is not covered, the physician may submit a request through the Prior Authorization or Formulary Exception process using a Drug Prior Authorization or Formulary Exception Request Form. Documentation to support the request and the completed request form should be faxed to **PHP c/o Pharmacy Services at (602) 674-6652 or (888) 887-9982**. The information submitted must have the diagnosis for therapy requested, past therapeutic failures on formulary drugs and other pertinent patient information such as cholesterol panels, iron studies and other lab work supporting the request, according to PHP Policies & Procedures. To maintain continuity of care and drug safety, samples are not considered a therapeutic trial. However trial quantities of medications on the Formulary or authorized through the health plan will be considered for continuity of care.

### **Prescription Quantities**

Prescriptions should be written for a therapeutic supply of medications. The amount to appropriately treat a medical condition may be 2, 7, or 14 days, up to a maximum of a 30-day supply. Trial quantities may be used when trying new treatments, if appropriate.

### **TELEPHONE PRESCRIPTIONS**

Whenever possible, the patient should be given the prescription of a formulary drug in writing. This will allow the patient to make use of the most convenient network pharmacy and enable the pharmacy to fill the prescription after normal office hours.

### **INDIVIDUAL PRESCRIPTIONS**

Each prescription must legally be prescribed for one individual only. If prescribing for a family, each family member must receive a prescription.
